Gemstone

DuRock Gemstone is a premixed, water-based, acrylic, quartz stone finish that elegantly simulates granite. The look is achieved solely through the use of coloured aggregates and large mica flakes mixed together in a clear emulsion resulting in a natural stone appearance; no colour pigment is required.

Gemstone comes in several standard colours, however it can be matched to a variety of colours to meet your specific needs.

The high quality, abrasion-resistant and attractive appearance of Gemstone creates an ideal finish for both interior and exterior applications over a multitude of surfaces.

HIGH QUALITY FINISHES | RESILIENT | ATTRACTIVE | ABRASION-RESISTANT
