May 7, 2020

To Whom It May Concern,

Canadian Stucco is a bondable and reliable EQI-licensed member of the EIFS Council of Canada, providing exceptional workmanship and unsurpassed customer service for more than 20 years. Canadian Stucco is recognized throughout the industry as a leading contractor exclusively employing only knowledgeable, qualified and experienced EIFS mechanics. Sizeable projects in excess of 200,000 square feet are regularly undertaken by Canadian Stucco's and we have proven that we have the capability to complete project on schedule, exceptional quality and cost effectiveness.

In 2019 Canadian Stucco successfully retrofitted an existing five storey brick building at 170 Trillium Way in Paris, Ontario with the DuRock PUCCS NC System featuring their best in class industry leading PUC-ROCK non-combustible mineral wool insulation system.

We chose the DuRock PUC-ROCK system due to its non-combustible rain screen properties combined with the superior drainage performance, complying with the building code requirements and 10 mm drainage cavity also satisfying OAA insurance requirements. Our experience with the DuRock System is that it is efficient to install using the pre-meshed non-combustible insulation and an exceptional finishing capability, rivaling all other cladding systems found on the market.

We look forward in partnering with DuRock in any future projects.
